Minmed Digital Name Cards: build notes

Moved out of the product scope on 16/10/2026: what happens when things go wrong, the WhatsApp preview options, the tests to run before the build, and what changes in the technical specification.

Figure, section and rule numbers refer to the product scope. Updated 16/10/2026.

1

When things go wrong

Situation	Visitor sees	Behind it
Wrong, mistyped or deleted link, or one with an old alias	“No card found” (Figure 8)	Counts towards rule 1.
Card deactivated (soft-deleted)	“This card is no longer active.” (Figure 7)	The contact file and card image stop at once. The Google Wallet pass shows as expired. The staff member can't sign in to My card.
A staff member changes their alias after sharing their link	People with the old link see “No card found”	Expected. My card warned before saving, and the staff member got a new card email.
An alias with other characters or the wrong length	My card explains the rule; nothing is saved (Figure 17)	The link doesn't change.
A Minmed account with no active card signs in to My card	“There's no name card for this account.” (Figure 15)	No card details are shown.
Apple Wallet pass of someone who has left	The pass stays on their phone	Its QR code opens the “no longer active” page. Minmed can't remove the pass.
Outage, or Base44 credits run out	Temporary error (Figure 9)	No old or cached details are shown.
The CAPTCHA can't load or isn't passed	The check again, with a way to retry	No card details are sent until a check passes.
A chat shows an old WhatsApp preview	The preview from when the link was first shared	WhatsApp keeps previews it already fetched. Opening the link shows the current card.

2

WhatsApp previews

Base44 can't make a per-card WhatsApp preview as is (scope section 10). The options:

Option	What you get	Cost
A. One Minmed preview	Every shared link shows the same preview: Minmed logo and “Minmed digital name card”. Everything stays on Base44.	Simplest. Drops the spec's per-card preview.
B. Card served by a backend function	Per-card preview on Base44, but links look like `me.minmed.sg/functions/card?code=…`.	Untested. Uglier links.
C. Public card pages on a small separate host	Per-card previews, clean links, and full control of noindex, contact files and the visitor's IP address. The admin console stays on Base44.	An extra service, its cost, and more build work.

Plan CONFIRMED: test option B on a throwaway app first, which takes a day or two. If it doesn't work cleanly, choose C if per-card previews are a must, otherwise A (open item 1).

3

Test before the build

On a throwaway app on a test subdomain, before the build starts.

1. Open a card link as WhatsApp and as Google's crawler. Check the preview tags, the noindex instruction and the sitemap, then share the link in a real WhatsApp chat.
2. Show Turnstile on the card page, verify its token in a backend function, and log the request headers to find the visitor's IP address. Then try rule 1 and the 30-minute pass from one phone, and from two phones on the same Wi-Fi.
3. Download a contact file and open the Google Wallet link from a backend function in iPhone Safari, Android Chrome, WhatsApp and Gmail. Add the pass, edit the card and check the pass updates, then deactivate the card and check the pass shows as expired.
4. Add a card's QR code to Apple Wallet with Create a Pass on two iPhones: one with Apple Intelligence and one without.
5. Check that a non-minmed Google account is refused, an Admin can't make themselves Super admin, a staff member can't open another card or the admin console, and an anonymous visitor can't list cards.
6. Sign in to My card as a staff member on a phone. Check they can change only the alias, that Preview changes nothing until they save, that the old link then shows “No card found”, and that the Google Wallet pass updates and a new card email arrives.
7. Check that emails reach staff and manage@minmed.sg.

4

What changes in the spec (draft 0.2 to 0.3)

Change	What	Spec 0.2 sections
REMOVE	Staff creating cards (`me.minmed.sg/create`); the approval process (pending review, reviewers, rejections, exact-version rule, held applications); approval emails to staff	§1.2, §3, Fig. 2, §5.1, §5.3, §6.1, §7
CHANGE	The staff view becomes a read-only My card page, with one box for a name or alias in the link and a QR code download	§5, §5.1
REMOVE	Signed links; watermark and reference labels	§4, §4.1, §4.3, §8, §8.1
REMOVE	“Active staff profile ✓ Checked [time]” and the How to verify panel	§4.1, §5.2
CHANGE	CAPTCHA options become four set rules (section 8): more than 3 card opens or contact downloads per IP in 1 minute; a busy-card check; a 30-minute pass that ends after 20 opens in 5 minutes; Turnstile checked on the server. Rules record only for the first 2 weeks	§4.5, §4.6, §8.1
CHANGE	Public address from `me.minmed.sg/first-last` to a random code, with an optional name or alias chosen by the staff member	§1.2, §4.3
CHANGE	Actors table becomes four users with a full permissions matrix	§3
CHANGE	Field rules: “changes require approval” becomes “maintained by admins”; staff change only their alias	§3.1
CHANGE	Monthly email reports become view counts in the admin console	§6
CHANGE	UI: the staff and recipient views become the public card and admin console in section 7	§5
CHANGE	Launch checks: replace ownership and approval checks with admin-only, random-code, CAPTCHA and “don't index” checks	§9
KEEP	Base44; public card fields and actions; Save contact; WhatsApp preview; deactivation; public-field filtering on the server; search exclusion; admin notifications and audit	§1.1, §3.2, §4.2, §4.4, §7.1
ADD	Admin console pages; Super admin and Admin roles; spreadsheet import; card email to staff with Google Wallet and Apple Wallet steps, and replies used for change requests; QR code for computer visitors; new link code; soft delete for leavers; offboarding owner and timing; failure handling	new sections
ADD	The WhatsApp preview approach; the tests to run before the build	§7.1, new section
